

SQL Assessment Test

Duration: 45 minutes

You are given two tables:

1. Orders
2. users

Note:

- Use appropriate joins
- Ensure no double counting
- Write clean and readable SQL

Questions

- Q1
 - Q1-part A: What is total revenue by user acquisition channel?
 - Q1-part B: Which channel has the highest average revenue per user?
- Q2
 - Q2-part A: Which countries contributed most to the drop?
 - Q2-part B: Which products are driving the decline?
 - Q2-part C: Explain your approach before writing SQL
- Q3: The business says: "Revenue dropped from 2023 to 2024 in online channel, but we're not sure if it's due to fewer users, lower order value, or reduced purchase frequency."
 - Q3-part A: Write an SQL code to calculate number of users, order value and purchase frequency in 2023 and 2024.
 - Q3-part B: Explain your approach before writing SQL.
- Q4: Classify each product into one of the following categories based on their 2024 revenue:
 - Q3-part A: **Growing** → revenue increased by more than 10%
 - Q4-part B: **Stable** → change between -10% and +10%
 - Q4-part B: **Declining** → revenue decreased by more than 10%
